+ SERVICE SPECIFICATION

Level 1

Our Level 1 service is a preventative measure to ensure that all high-contact areas are effectively disinfected, eliminating and removing 99.9999% of bacteria, viruses, and spores in seconds using Steri-7 XTRA. The service provides peace of mind to all employees.

This service includes the disinfecting of the following items:

- All entrance/exit doors/lifts on each floor (including door handles)
- All workstations (desks, keyboards, mouse, phone)
- All bathrooms, change rooms and end of trip facilities
- All hard floors
- All kitchens areas (including microwaves, fridges)
- All chairs and armrests (non-fabric)
- All light switches
- Any other areas identified as high contact

Step One: Site Risk Assessment – Job Safety Analysis

SPS staff will attend during active hours so that we can observe traffic and gain some practical insights into a “typical” business/trading day. During this visit, we will conduct a pre-start site risk assessment and job safety analysis worksheet. Our comprehensive risk assessment process identifies any potential hazards within the workplace and what protective control measures must be put in place prior to the commencement of any work. This ensures that all SPS employees and client personnel are as safe as possible at all times.

Step Two: Preparation and Training

All SPS cleaners have gone through a Biohazard disinfectant cleaning training module. For the Level 1 specialist cleaning service, SPS will ensure that all cleaners competencies on cleaning methodologies specific to tasks performed, such as hazard identification, personal protective equipment, chemical handling, use of microfibre, etc. are up to our high standards. This results in cleaners that have a deep understanding of the requirements for the specialist cleaning services and the ability to perform these services effectively.

Step Three: Service Delivery

When delivering these cleaning services at your asset, SPS staff will make sure that any areas that pose any risk to either themselves or others are identified and dealt with appropriately (e.g. isolating areas where hazardous materials are present). Once all hazards have been appropriately accounted for, the cleaning operators will begin their services, using tried and tested methodologies that are proven to give the best results.

Step Four: Post-Clean Analysis

After the successful delivery of cleaning services, a post-clean analysis is conducted to ensure that the best result possible was achieved and to ensure the continuous improvement of service delivery. The post-clean analysis checks all cleaning methodologies used against the result achieved to ensure that all methods used for each task resulted in an excellent cleaning standard. The results from these post-clean analyses are used to determine where new cleaning methodologies need to be implemented or where old methods can be improved.

STERI-7 XTRA Concentrate

Features and benefits

- Reactive Barrier Technology protection between cleans
- High level disinfectant cleaner
- Non-corrosive
- Non-residual organoleptic effect on food
- Low toxicity
- Effective in soft or hard water
- No reported resistance
- Triple active reducing need to rotate products
- Maintains efficacy in heavy organic soiling, blood and proteins

Recommended usage

The STERI-7 XTRA Concentrate can be used wherever the highest standards of disinfection is required and are suitable for use in healthcare and food processing environments and all other workplaces where there is a risk of cross contamination. The product has been tested against and is effective against a number of commonly occurring bacteria, yeast and viruses that are known to be highly transmissible and can result in infections and illnesses.
